Question 1
Correct
Mark 20.00 out of 20.00

Create a python function to compute the fewest number of coins that we need to make up the amount given.

For example:

Test	Input	Result
ob1.coinChange(s,amt)	3	3
	11	
	1	
	2	
	5	

Answer: (penalty regime: 0 %)

```
Reset answer
```

```
1 v class Solution(object):
        def coinChange(self, coins, amount):
 2 1
 3
            ####################
                                      Add your Code Here ##########
            #End here
 4
 5
            if amount == 0 :
 6
                return 0
 7
            if min(coins) > amount:
               return -1
8
 9
            dp = [-1 for i in range(0, amount + 1)]
10
            for i in coins:
11 ,
                if i > len(dp) - 1:
12
                    continue
13
                dp[i] = 1
14
                for j in range(i + 1, amount + 1):
15
                    if dp[j - i] == -1:
                       continue
16
17
                    elif dp[j] == -1:
18
                       dp[j] = dp[j - i] + 1
19
20
                        dp[j] = min(dp[j], dp[j - i] + 1)
21
            return dp[amount]
22
        #End here
```

	Test	Input	Expected	Got	
~	ob1.coinChange(s,amt)	3 11 1 2 5	3	3	*
~	ob1.coinChange(s,amt)	3 12 1 2 5	3	3	~
*	ob1.coinChange(s,amt)	3 22 1 2 5	5	5	~

```
Question 2
Correct
Mark 20.00 out of 20.00
```

Create a python program to find Minimum number of jumps to reach end of the array using naive method(recursion) using float values

For example:

Test	Input	Result
minJumps(arr, 0, n-1)	6	Minimum number of jumps to reach end is 2
	2.3	
	7.4	
	6.3	
	1.5	
	8.2	
	0.1	

Answer: (penalty regime: 0 %)

```
Reset answer
```

```
1 def minJumps(arr, 1, h):
        ###########
                      Add your code here ##########
 2
 3
        #Start here
4
        if (h == 1):
 5
            return 0
        if (arr[1] == 0):
 6
           return float('inf')
 7
 8
        min = float('inf')
9
        for i in range(l + 1, h + 1):
10
            if (i < l + arr[l] + 1):</pre>
11
                jumps = minJumps(arr, i, h)
                if (jumps != float('inf') and
12
13
                           jumps + 1 < min):</pre>
                    min = jumps + 1
14
15
16
        return min
        #End here
17
18
   arr = []
19
   n = int(input())
20 v for i in range(n):
        arr.append(float(input()))
21
22 print('Minimum number of jumps to reach', 'end is', minJumps(arr, 0, n-1))
```

Question **4**Correct

Mark 20.00 out of 20.00

Write a python program to Implement Minimum cost path using Dynamic Programming.

For example:

Input	Result
3	8
3	

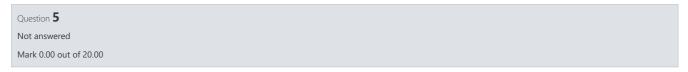

Answer: (penalty regime: 0 %)

```
R = int(input())
    C = int(input())
   def minCost(cost, m, n):
3 -
 4
        tc = [[0 for x in range(C)] for x in range(R)]
5
        tc[0][0] = cost[0][0]
 6
        for i in range(1, m+1):
 7
            tc[i][0] = tc[i-1][0] + cost[i][0]
 8
        for j in range(1, n+1):
9
            tc[0][j] = tc[0][j-1] + cost[0][j]
10
        for i in range(1, m+1):
            for j in range(1, n+1):
11
                tc[i][j] = min(tc[i-1][j-1], tc[i-1][j], tc[i][j-1]) + cost[i][j]
12
13
14
        return tc[m][n]
15
16
    cost = [[1, 2, 3],
            [4, 8, 2],
[1, 5, 3]]
17
18
19
   print(minCost(cost, R-1, C-1))
```

	Input	Expected	Got

Marks for this submission: 20.00/20.00.

Write a python program for the implementation of merge sort on the given list of values.

For example:

Input	Result
5	Given array is
12	12 10 61 2 3
10	Sorted array is
61	2 3 10 12 61
2	
3	
6	Given array is
20	20 10 31 49 87 6
10	Sorted array is
31	6 10 20 31 49 87
49	
87	
6	

Answer: (penalty regime: 0 %)
